Total and Average Site EUI Trend by Year and State

Total energy consumption increased over time, while average energy intensity declined, indicating portfolio growth alongside efficiency improvements.

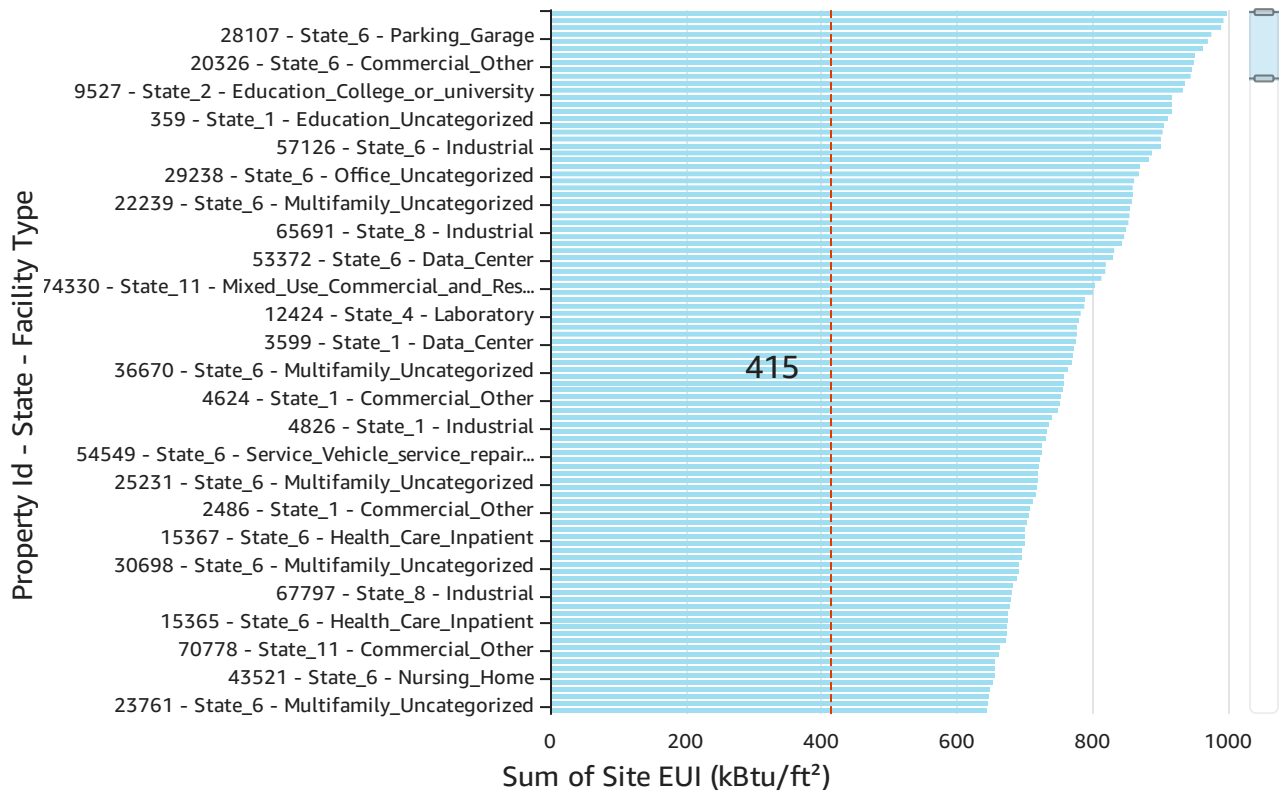

Average Energy Use Intensity (EUI) by State and Building Type

Commercial properties, particularly in State_4 and State_6, exhibit the highest energy intensity and represent the strongest opportunities for targeted efficiency improvements.

Top 1,000 Buildings by Site EUI

Energy intensity among the top 1,000 buildings ranges from ~600 to 1,000 kBtu/ft²/year, significantly above portfolio norms. (Avg of Top 1,000 = 415)

Top Energy-Intensive Facility Types

Data centers, laboratories, and healthcare facilities exhibit the highest energy intensity across the portfolio
